Dear Colleague,

I am writing to introduce the **Starlit™ Solar WiFi Fence Post Light**, an innovation that merges smart lighting, renewable energy, and wireless communication. This lantern extends WiFi and mobile coverage by 300 m to 1 km along fencing networks, transforming essential infrastructure into a backbone of connectivity and safety.

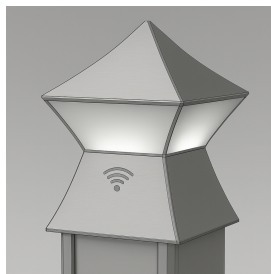

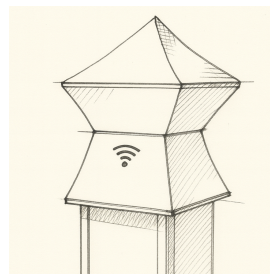

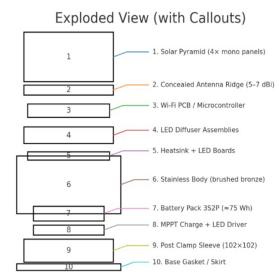

In partnership with **Ross Engineering** and **Hardy Fencing** — recipients of the 2025 Supplier Diversity Award — A Starlit Co. is developing solutions that not only serve rural and remote communities but also provide new opportunities for regional designers, First Nations enterprises, and artists to integrate technology into their environments and scale their businesses.

This initiative represents an intersection of health, safety, and community empowerment, creating infrastructure that supports preventative health measures, education access, and local entrepreneurship. Through collaborative efforts, we are building both physical and digital pathways that bring equity and inclusion to communities across Australia.

Sincerely,

Sarah Blackman
